

METH TOOL

AIR / FUEL INNOVATIONS
A DIVISION OF SD CONCEPT ENGINEERING, INC.

**The Last Methanol Kit
You'll EVER Want!!!**

COOLER AIR, MORE OCTANE, A PROGRAMMABLE CONTROLLER, AND IT'S SAFER... HOW CAN YOU SAY NO?

Taking your Meth Injection needs to the next level, AFI's user-friendly Meth Tool gives you far more control when compared to other meth products and was designed with your safety in mind.

INNOVATION BY DESIGN

Instead of the typical dial operated controllers that only offer two tuning points, our controllers have an internal MAP sensor with individual cell sites up to 16 psi of boost. If you run more than 16psi, the nozzle will continue to spray at the last given percentage. Our fully programmable system is also referenced to both boost AND engine rpm.

Another superior advantage to the Meth Tool is our innovative PUMPLESS tank system that uses compressed air to pressurize the fluid. Without an open reservoir, you no longer have to worry about the methanol evaporating or getting contaminated.

Our Meth Tool comes complete with stainless hardline and leak-free connectors offering added peace of mind over nylon hose which is more prone to leaking and melting. And to top it all off, our meth injection system has less draw on your electrical system and a built-in pressure monitor to let the driver know if the system is low on pressure.

UNIQUE FEATURES OF THE METH TOOL:

- Most precise methanol kit available
- Fully programmable
- Electronically controlled nozzle
- Systems are pumpless
- Never lose methanol to evaporation again
- Lower intake temps even further with pure methanol
- No leaky o-ring fittings
- No dangerous nylon hose that can melt

AFI's Pulse Modulated/Programmable Methanol kit

Base kit price is \$695.00 (Call for additional options)

REVIEWING THE NUMBERS

Datalog from a dyno pull of an AFI MethTool on an 1100hp Chrysler 360. The car previously had 240* intake temperature at 18psi with the intercooler.

After removing the intercooler and changing to the AFI MethTool it now has 154* air temperature at 24psi!

INSTALLATION AND MOUNTING

AFI's Meth Tool works well with carbureted and EFI applications. Installation is straight-forward and the tanks can be mounted in many different configurations to suit your specific needs.

Simple install in a Chevelle showing both tanks mounted together next to the fuel cell

Air tank mounted in a Dodge Durango under the passenger side keeping the tanks hidden

The meth tank mounted in the back quarter panel of a Durango doesn't take up any interior room of the vehicle

Meth nozzle as installed on a '97 Cobra

Meth nozzle spraying directly through a modified carb offers perfect distribution and atomization

Another mounting option as installed in the trunk of a Mustang where the tanks are split
